### **DETAILED ACTION**

This Office action is in response to the communication filed 7-7-03.

Claims 1-10, 12-24, 26-38, 40, 42-44, 46, 50, 53, 54, 56, 58, 63-108 are pending in the instant application. Claims 13-21, 23, 24, 27-38 have been withdrawn from consideration as being drawn to non-elected inventions (see communications filed 7-21-00 and 8-21-00).

### ***Election/Restrictions***

Pursuant to 37 C.F.R. 1.142(a), whereby the distinctness and independence of the inventions of the instant application have become clear upon further consideration of the amendments filed 7-7-03, an Examiner's action on the merits of the amendments and arguments filed by applicant on 7-7-03, insofar as they pertain to the elected invention, is hereby deferred until an election has been made of the inventions of claims 1-10, 12, 22, 26, 40, 42-44, 46, 50, 53, 54, 56, 58 and 63-108. (See MPEP 810.02 and 811).

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, 12, 40, 43, 44, 46, 50, 70-84, 98-99, 104-105, drawn to methods of reducing nucleic acid expression, classified in class 435, subclass 6.
- II. Claims 22, 26, 42, 53, 54, 56, 58, 63-69, 85-97, 100-103, 106-108, drawn to nucleic acids, classified in class 536, subclass 24.5.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the method of inhibiting nucleic acid expression can be obtained using a different nucleic acid construct such as a ribozyme or an antisense. Also in the instant case search for the nucleic acid constructs claimed and the method claimed are not coextensive. A search required for the method claimed would require a text search for the method of inhibiting expression of a target gene of interest and a search for the general method of using dsRNA and the search required for the product claimed would require searching for oligonucleotides in the conformations claimed, which may or may not be used in a method of inhibition. Moreover, even if the product were known, the method of inhibition of expression may be novel and unobvious in view of the preamble or active steps.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. And because these inventions are distinct for the reasons given above and the search required for Group I is not coextensive with the search required for proper examination for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and a product claim is subsequently found allowable, withdrawn process claims that depend from or otherwise include all the limitations of the allowable product claim will be rejoined in accordance with the provisions of MPEP § 821.04. **Process claims that depend from or otherwise include all the limitations of the patentable product** will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103, and 112. Until an elected product claim is

Art Unit: 1635

found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowed product claim will not be rejoined. See "Guidance on Treatment of Product and Process Claims in light of *In re Ochiai*, *In re Brouwer* and 35 U.S.C. § 103(b)," 1184 O.G. 86 (March 26, 1996). Additionally, in order to retain the right to rejoinder in accordance with the above policy, Applicant is advised that the process claims should be amended during prosecution either to maintain dependency on the product claims or to otherwise include the limitations of the product claims. **Failure to do so may result in a loss of the right to rejoinder.**

Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.
